AI

PORTFOLIO PROJECT

AI Use Case Portfolio Analyzer

Turn AI idea sprawl into a governed portfolio, with one shared data foundation underneath.

Ontology · Governance gates · Deterministic triage · Shared layer

THE PROBLEM

Every team brings AI ideas. Almost nobody can triage them.

DIVERGENT VOCABULARY

Customer, risk, and value mean five different things across teams.

GOVERNANCE LAST

Controls are applied after the build, if they are applied at all.

QUICK WINS BURIED

High value and high risk sit side by side with no shared standard.

NO SHARED FOUNDATION

Every use case rebuilds the same data, again and again.

THE INSIGHT

The fix is not a better score. It is a shared vocabulary and hard gates.

SCORE ALONE

- A number invites arguing.
- High risk can be scored upward.
- Nothing stops a bad idea from winning.
- The model is the authority.

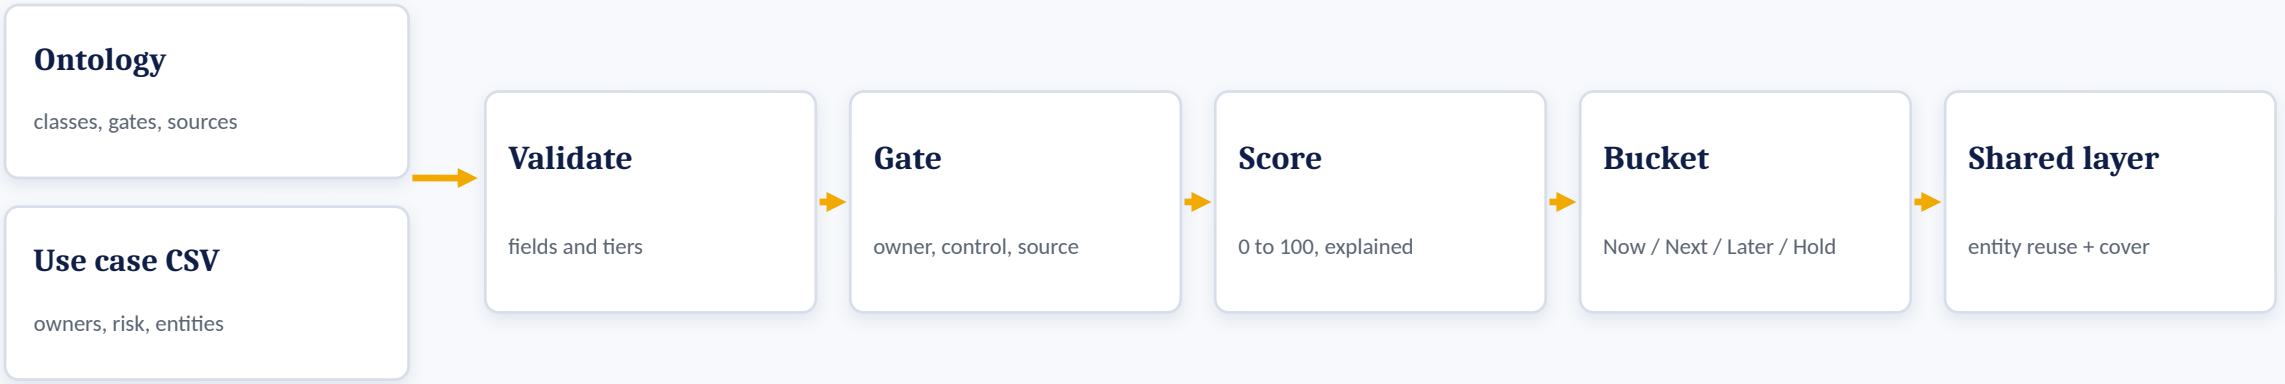

ONTOLOGY PLUS GATES

- Shared meaning first.
- Hard gates before any score.
- A missing control cannot be out-scored.
- The rule is the authority.

The score orders what is allowed. It never overrides what is required.

HOW IT WORKS

A short pipeline, driven by the ontology.

The ontology is the source of truth. Change the gates or the approved sources, and the behaviour changes without rewriting the tool.

THE GATE

A high score cannot rescue a missing control.

Use case	Risk	Score	Governance	Outcome
Policy Q&A Assistant	1	98.8	None	Now
KYC Document Extraction	3	81.6	None	Now
Credit Memo Summarizer	3	69.0	Owner TBD, no monitoring, unapproved source	Hold
Contract Clause Extraction	3	60.2	Owner TBD	Hold

The Credit Memo scores 69 and still stops. Risk tier 3, no named owner, no monitoring, and an unapproved source. The gate holds the line, not the number.

TRIAGE

Four buckets, each with a clear rule.

NOW

5

Score 70+, readiness 4+, value 3+, effort 12 weeks or less, no gaps.

Policy Q&A
Internal Knowledge Search

NEXT

4

Score 55+, no gaps.

Churn Forecasting
Complaint Triage

LATER

1

No gaps, but low score or low readiness.

Sentiment Dashboard

HOLD

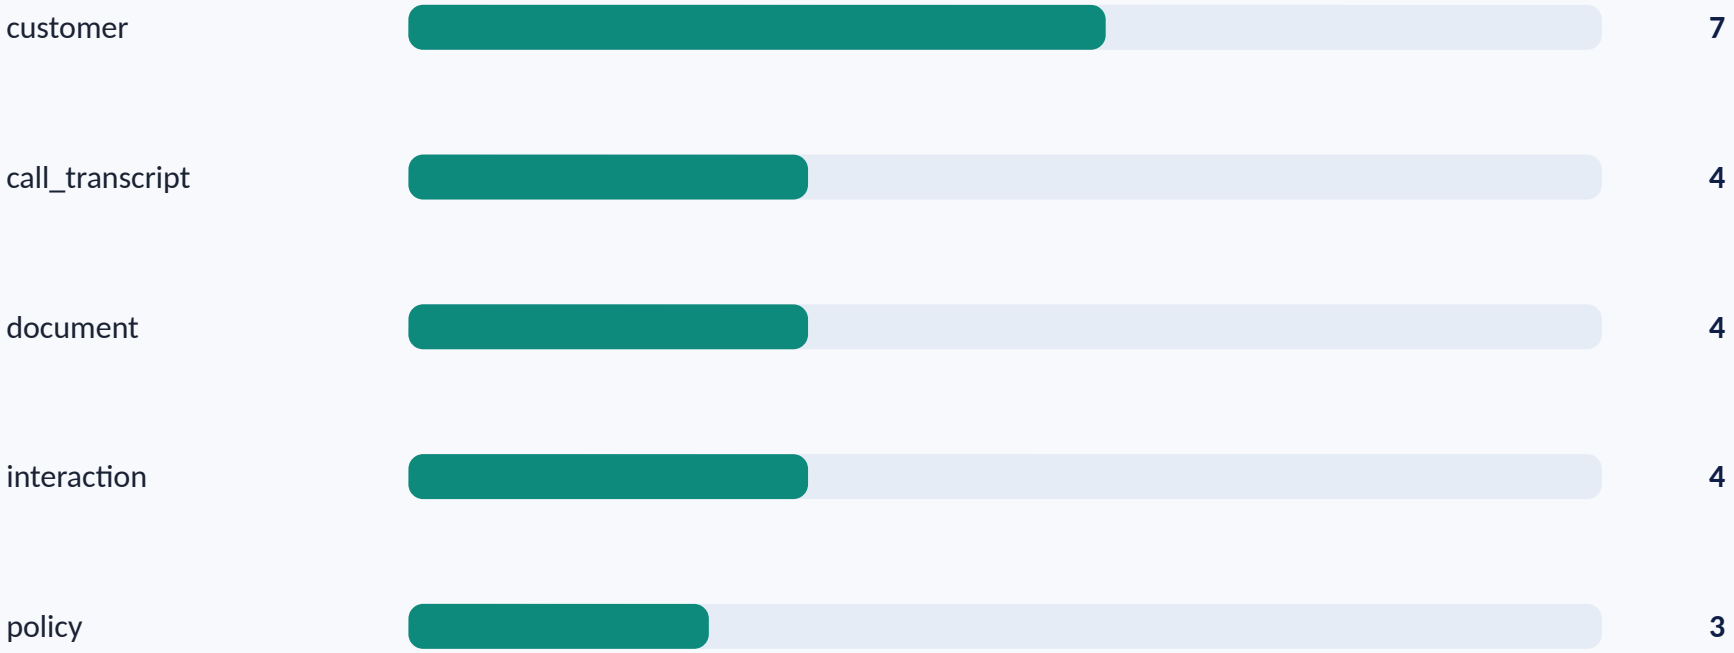

2

Any governance gap, regardless of score.

Credit Memo
Contract Clause

THE SHARED LAYER

Many use cases, one foundation.

RECOMMENDED

customer
policy
document
call_transcript

100% coverage

Fit the entities, then the sources. The shared layer is the foundation every use case can stand on.

HONESTY

What is real, what is invented, what is a judgement.

REAL

The ontology, the gates, the deterministic score, and the shared-layer maths.

INVENTED

The twelve use cases and the 1 to 5 values. Synthetic, not employer data.

JUDGEMENT

The weights, the bucket rules, and the simplified risk tiers.

A portfolio tool only works if readers can tell the three apart.

AI Use Case Portfolio Analyzer

Ontology, gates, triage, and a shared data layer. A small tool that shows the pattern.
